Media Fact and Fiction

No one could have been more surprised than I regarding the news of a book deal involving me, or others associated with the case. While the media's public outcries are colorful, it appears they have no interest in publishing the truth and, glory in making loud uninformed noises. The media's choice to create sensationalism has resulted in increased ratings, reinvented failing tabloid *news shows* and demanded higher sponsorship dollars, all at the expense of an innocent child, the condemnation of the child's family and professionals associated with the case.

Reporting sensationalism is taken for granted as the accepted practice. Such reporting poses a "*clear and present danger*", for example, a risk or threat to safety, defamation, obscenity and offensive speech in the public forum. The narrowing to virtual disappearance the legal definition of "*obscenity*" has created an environment in which the presence of unpleasant speech and reporting inaccuracies is taken for granted.

The Dalai Lama suggested that people follow the three "R" . . .
Respect for self, Respect for others and Responsibility for all your actions.
